Advanced Floor Covering Removal

At Mavo Systems, we know our clients expect quality, which is why technology is a top priority with every service we provide.

Mavo Systems' floor covering removal service is the perfect example of how state-of-the-art technology increases the quality of our work, without raising the cost. Our technicians use a self-powered, self-contained floor scraper, designed to remove flooring materials in any size space. From asbestos flooring to carpet to sheet vinyl, the power scraper can remove any floor covering material. The power scraper leaves floors cleaner than the standard manual removal method, and is versatile enough to fit through any standard doorway and in most elevators.

Unlike most floor covering removal devices, which feature a fixed blade position, Mavo Systems' power scraper is a 2,800 pound drivable machine with hydraulic systems that allow the angle of the blade to be adjusted freely and quickly. This advanced floor covering removal equipment allows Mavo Systems to remove flooring up to four times faster than traditional methods. For Mavo Systems' clients this means the project can be done faster, saving time and money.

As always, clients can rest assured that Mavo Systems' technicians have been thoroughly trained to operate the system efficiently and safely.

"This advanced machine allowed Mavo to perform a fast turnaround abatement of a 100,000+ sq. ft. building in preparation for demolition."

Matt Koonce, Target Corporation

Mavo Systems' advanced floor covering removal system effectively removes:

- | | |
|---------------------|-----------------|
| ■ Carpet | ■ Rubber |
