Mold Remediation

Mold spores, pollen, even bacteria and viruses, linger in walls, ductwork, under floors and in damp areas of commercial, industrial and institutional buildings.

These contaminants breed poor air quality and can be hazardous to the people working in affected buildings. Luckily, a company that cares about the health and safety of its employees and customers can take action.

Drawing from years of environmental remediation experience, our team of environmental specialists and project managers work with you to complete the remediation process efficiently, thoroughly and with minimal disruption to your business.

You also save time and money because Mavo Systems employs state-of-the-art technology, equipment and techniques in every job it takes on.

"Their work is very professionally performed and they have always been within their stated budgets."

Jim Busscher, The Egan Companies
